

Performance Rollershade
CLUTCH WITH
CHAIN LOOP

CLUTCH WITH CHAIN LOOP

Architecturally simple, the contemporary rollershade style is both beautiful and highly functional. Rolls up for a minimalistic profile at the top of a window, or conceals within a valance or soffit structure.

SHADE OPERATION

- Fabric rolls onto a heavy-duty aluminum tube. Diameter of tube based on fabric selection and size of shade
- Clutch color-coordinated to fabric unless otherwise specified
- Mounting brackets coordinate with clutch unless otherwise specified. If available, covers will match clutch color on outside mount shades
- Control loop approximately 75% the length of the shade. Other lengths available

SHADE DETAILS

- Shade fabric falls from rear of tube closest to window. Reverse roll available
- Shade fabric measures $1\frac{1}{8}$ " - $1\frac{3}{8}$ " narrower than specified width to accommodate clutch, idle pin and brackets, see inside mount gaps
- Bead chain color-coordinated to shade fabric unless otherwise specified, Metal Ball Chain available
- Sewn bottom flat hem with aluminum internal hem bar

DESIGN CONSIDERATIONS

- If shade is specified wider than the width of the fabric it will be railroaded. A horizontal seam may be required
- Shades with lengths over three times the width are not recommended as they may track unevenly
- If specifying with duplex fabric consider reverse roll option so top of roll matches the shade body
- To cover light gaps on top of window, we recommend a Solarscreen Flat Valance or Curved Cassette System
- If specified without Top Treatment, consider Ultra Metal Clutch upgrade for a distinct expression
- We recommend hiring a professional installer to ensure shades are level and shimmed for proper operation. Frayed edges caused by improper installation will not be covered under craftsmanship warranty
